

## Papua Expeditions check-list birds

### Easy Papua birding expedition

Below we present a simple species-level check-list of birds potentially to be encountered on our Easy Papua birding expedition, which covers the following general locations and habitats in Papua or Indonesian New Guinea: (1) Baliem Valley cultivations in the Snow Mountains near Wamena; (2) Lake Habbema alpine plateau and Ibele Valley upper montane cloud-forests in the Snow Mountains near Wamena; (3) lowland forest in the northern lowlands near Jayapura; (4) Lake Sentani near Jayapura; (5) Arfak montane forests in the Mount Indon area near Manokwari; (6) lowland forest near Sorong; (7) Waigeo Island in the Raja Ampat group off Sorong; and (8) a Dampier Strait atoll.

We define Papua or Indonesian New Guinea as the region encompassed by the western half of the subcontinental island of New Guinea up to the border with Papua New Guinea at 141° longitude, plus the following groups of satellite islands: (1) the Raja Ampat archipelago (until recently generally referred to as the West Papuan Islands), including the main islands of Waigeo, Batanta, Salawati, Misool, Kofiau and Gebe; (2) the Geelvink Islands (also known as the Schouten Islands), including the main islands of Biak-Supiori, Numfor and Yapen; and (3) the Aru Islands. We further follow the delineation of the New Guinea or 'Papuan' region as proposed initially by Mayr (1941), and perpetuated by Rand and Gilliard (1967), Beehler *et al.* (1986), and Diamond *et al.* (2009). Classification, taxonomy and nomenclature generally follow Sibley and Monroe (1990; 1993), with detailed annotation of present deviations in species-level taxonomy and vernacular naming envisaged for future updates of this check-list. We indicate these author's orders, families, subfamilies and/or tribes, but omitted their suborders, infraorders, parvorders and/or superfamilies for the sake of simplicity. For taxa belonging to superspecies or allospecies, who's treatment at species level is not widely accepted, we have encoded this by the use of scientific trinomials and square bracketing of the binomen.

We list 415 bird species potentially to be encountered on our Easy Papua birding expedition. These include 23 Papua endemics, 217 regional New Guinea endemics, 157 widespread residents (at least six of which also have visiting migratory populations not included again in the ensuing category), and 18 regular migrants.
